In order to provide our clients with comprehensive structural services, BASE has expanded its Special Inspector capabilities to include Concrete Testing. Over the past three years BASE has tested over 15,000 concrete cylinders and is recognized as one of the few accredited Concrete Testing labs in the State. The following projects are just a few examples of our testing and inspection experience:

- Concrete Testing and Special Inspections for the 23-story **215 North King** project and 6 ½ level parking garage located on the edge of Downtown in Honolulu, Hawaii.
- Concrete Testing and Special Inspections for the **Honolulu Design Center**, a three-story 80,000 square foot retail complex on Kapiolani Boulevard.
- Concrete Testing for **The Pinnacle Honolulu**, a new 36-story structure located in the downtown community of Honolulu, Hawaii.
- Concrete Testing for the new 39-story tower, **Capital Place**, in the downtown area of Honolulu, Hawaii. The project includes a residential tower with 394 units, a new showroom for the Pflueger Honda dealership, and public parking.
- Concrete Testing and Special Inspections for **Safeway**, Kapahulu, HI. This 90,000 square foot retail project utilizes tilt-up concrete walls for fire separation, structural support and architectural expression. The project's urban location requires the structure to be configured for roof top parking that includes a long curved access ramp.
- Department of Defense Structural Quality Control Services for the **Pacific Command Center** located in Camp Smith, Hawaii is a Design/Build project of a 360,000 square foot high tech office building designed to house the Pacific Command Center.
- Special Inspections for the **Plaza at Punchbowl**, a multi-story residential development that includes 94,000 square foot of space in a 7-story post-tensioned concrete structure with one level of below grade parking.
- Concrete Testing for the **Actus Lend Lease Privatized Housing Initiatives** Design/Build project located in Schofield Barracks, Oahu, Hawaii.
- Concrete Testing and Special Inspections for **Pacific Allied Products**, a 90,000 square foot warehouse facility located in Kapolei, Hawaii.
- Concrete Testing and Special Inspections for the six-story **Public Storage**, an industrial and commercial complex on Kapiolani Boulevard.

Baldrige and Associates Structural Engineering, Inc. is committed to providing a full range of professional services.
